Business Requirements Document (BRD)

Project: Port of Duqm Corporate Website & E-Services Portals
Client: Port of Duqm Company S.A.O.C (PODC)
Vendor: Simbiz (Implementation Partner)

Version: 1.1 (Final)
Date: 09/12/2025

Table of Contents: Port of Duqm Corporate Website & E-Services Portals

1. Introduction

- 1.1 Purpose
- 1.2 Scope
- 1.3 Objectives

2. Overall Solution & Technology

- 2.1 Technology Stack
- 2.2 System Architecture
- 2.3 Security & WAF
- 2.4 Deployment & Environments

3. Stakeholders & Global Roles

- 3.1 Key Stakeholder Groups
- 3.2 Global System Roles (High Level)

4. Website & CMS Requirements (WordPress)

- 4.1 Objectives
- 4.2 Functional Features
    - 4.2.1 Structure & Navigation
    - 4.2.2 CMS Capabilities
    - 4.2.3 Social Media & Feeds
    - 4.2.4 Careers & Training

5. Vendor Registration & Approval System

- 5.1 Objectives
- 5.2 User Roles
- 5.3 Vendor Registration Data Model
- 5.4 Registration & Approval Workflow
- 5.5 Reports (Vendor Module)

6. Tender / RFP Management System

- 6.1 Objectives
- 6.2 Roles
- 6.3 Key Forms & Data
    - 6.3.1 Tender Request Form (Internal)
    - 6.3.2 RFQ / RFP Form (External Facing)
    - 6.3.3 Bid Opening Form
- 6.4 Tender & RFP Lifecycle Workflow
    - 6.4.1 RFP Issuance & Vendor Notification Process
- 6.5 Notifications & Letters
- 6.6 Reports (Tenders)

7. Gate Pass Management System

- 7.1 Objectives
- 7.2 Roles
- 7.3 Account Registration & Login
- 7.4 Gate Pass Request Fields
- 7.5 Gate Pass Workflow
- 7.6 Ticketing System (Support for Gate Pass)
- 7.7 Search & Filters
- 7.8 Reports (Gate Pass)

8. Permit to Work – HSSE Module (PTW)

- 8.1 Objectives
- 8.2 Technology & Integration
- 8.3 PTW Workflow
- 8.4 Core Form Fields
- 8.5 POD Staff Review Panels (Sections 7 & 8)
- 8.6 Notifications & Audit

9. Reporting & Analytics (All Modules)

10. Non-Functional Requirements

- 10.1 Performance
- 10.2 Availability & DR
- 10.3 Security
- 10.4 Usability

11. Assumptions & Dependencies

12. High-Level Process Diagrams (Textual)

- 12.1 Website & CMS (Content & Careers)
- 12.2 Vendor Registration & Approval – High-Level Process
- 12.3 Tender / RFP Management – High-Level Process
- 12.4 Gate Pass Management – High-Level Process
- 12.5 HSSE Permit to Work (PTW) – High-Level Process

1. Introduction

1.1 Purpose

This BRD defines the business and functional requirements for:

1. Public corporate website (WordPress CMS).
2. Vendor Registration & Approval System.
3. Tender / RFP Management System.
4. Gate Pass Management System.
5. Permit to Work – HSSE (PTW) Module.

The aim is to replace and enhance existing manual and legacy processes, provide a modern digital presence, streamline operations, and improve security and traceability across PODC's external-facing workflows.

1.2 Scope

In scope:

- Design, development, integration, testing, and deployment of:
  - A bilingual (Arabic/English) corporate website with CMS.
  - Three custom web applications for Vendor Registration, Tender/RFP, and Gate Pass.
  - HSSE Work Permit Application module, as per the dedicated PTW BRD merged into this document.
- Role-based access control and workflows per module.
- Email notification templates (system-generated letters and transactional emails).
- Reporting and exports (PDF, CSV where relevant).
- Deployment on PODC infrastructure with FortiWeb WAF and third-party security evaluation prior to go-live.

Out of scope (for now):

- Chatbot functionality (explicitly out of current scope per Technical Proposal).
- Generation of contracts / POs in the Tender module (status update + notification only).
- Deep integration with external ERP/IFS (to be handled as separate integration phase if required later, though technical proposal envisages it).

1.3 Objectives

- Provide a modern, responsive, bilingual corporate website aligned with PODC brand and strategic focus areas (Investments, Sustainability, Port Services, SMEs, etc.).

- Digitize and secure interaction with vendors, bidders, visitors, contractors, and HSSE-related processes.
- Enforce strong cybersecurity practices and readiness for FortiWeb WAF and third-party security audit.
- Ensure full traceability of approvals and decisions for audit and compliance.

2. Overall Solution & Technology

2.1 Technology Stack

- **OS / Server:** Ubuntu Linux (same as existing PODC environment).
- **Web Server:** Apache HTTP Server.
- **Database:** MySQL.
- **Languages / Frameworks:**
    - Public Website & CMS: WordPress (PHP).
    - Custom Modules: Separate PHP applications, most likely Laravel or CodeIgniter, not as WordPress plugins (Hybrid architecture).
- **Front-end:** HTML, CSS, JavaScript (responsive, mobile-first).

Hybrid approach is explicitly confirmed: WordPress for website, independent PHP framework(s) for Gate Pass, Vendor, Tender, HSSE PTW, all running on the same Ubuntu/Apache/MySQL environment.

2.2 System Architecture

- **Logical Layers:**
    - Presentation Layer: WordPress theme + individual frontends for each PHP module.
    - Application Layer: Laravel / CodeIgniter apps handling business workflows.
    - Data Layer: Separate MySQL schemas (or clearly separated tables) for each module.
- **Integration Points:**
    - Single sign-on approach (if feasible) between modules using shared authentication/SSO pattern.
    - Email gateway for notifications.
    - Payment gateway for vendor registration fees.
    - Possible future integration with internal IFS procurement (for vendors and tenders).

2.3 Security & WAF

- FortiWeb WAF will be applied; development should follow standard secure coding practices and OWASP Top 10 (XSS, CSRF, SQL Injection, etc.), with no special WAF exceptions assumed at design time.
- Final strict security rules will be defined by a third-party security evaluator before go-live.
- Security features aligned with the technical proposal:
    - HTTPS, SSL/TLS, HSTS, CSP, XSS/CSRF protection.
    - Strong password policies, brute-force protection, CAPTCHA, session timeout.
    - File upload restrictions, magic byte validation, self-hosted assets (no third-party CDNs).

2.4 Deployment & Environments

- **Environments:** DEV, UAT, PROD; all on PODC infrastructure.
- Production installation to be prepared and installed one week before Simbiz's internal "go-live notification" to PODC, so POD IT can prepare network and VMs.
- Backup & DR to respect RTO/RPO of approximately 24 hours.

3. Stakeholders & Global Roles

3.1 Key Stakeholder Groups

- PODC Management (CEO, Board, heads of departments).
- Procurement Department.
- Commercial Department.
- Security Department.
- HSSE Department.
- HMO / Marine Operations.
- IT Department.
- Media Department.
- External Vendors & Suppliers.
- Tender Board / ITC Members.
- Visitors / Contractors.
- ROP (Royal Oman Police) officers at gates.

3.2 Global System Roles (High Level)

Across modules, common roles:

- **System Super Admin (IT)** – global system administration, user and role management, configuration.
- **Module Admins** – per module (Vendor, Tender, Gate Pass, HSSE PTW).
- **Media / CMS Admin & Editors** – manage content, news, pages.
- **Procurement Officers** – vendor registration, tenders, evaluations.
- **Tender Committee / Board Members** – 3-key bid opening and approval tracking.
- **Department Approvers** – relevant departments for tender technical evaluation, gate pass and HSSE approvals.
- **Subsidiary Admins** – e.g., ATD, ACT gate pass approvals.
- **External Users** – Vendors, Visitors, Contractors, Applicants (careers, HSSE).

4. Website & CMS Requirements (WordPress)

4.1 Objectives

- Provide a modern, responsive, bilingual corporate website highlighting:
    - Investments
    - Sustainability
    - Port Services
    - News, Events & Social Media
    - Shareholders (e.g., ASYAD)
    - Careers & Training
    - SMEs
- Ensure easy content management by Media Department and alignment with PODC's branding and technical proposal.

4.2 Functional Features

4.2.1 Structure & Navigation

- Bilingual (English/Arabic) site, including RTL support in Arabic.
- Sections (non-exhaustive):
    - Home (hero, key metrics, latest news, featured projects).
    - About Us, Vision, Mission & Values, CEO Message, Board Members.

    - Port Services, Marine Services, Nautical Information, Procedures & Forms, Port Rules & Regulations, Tariffs.
    - Investments, Industrial Land, Logistics Land, Incentives.
    - Sustainability (Green Steel, Decarbonization 2050, Wind Mills, Hydrogen, Refineries, etc.).
    - Ras Markaz, Duqm Free Zone, Terminals & Shipping Lines.
    - SMEs and related initiatives.
    - News, Events & Media Center (Press Releases, Photos/Videos).
    - Shareholders / Partners (e.g., ASYAD).
    - Careers & Training.
    - Contact, Emergency Numbers, Feedback/Enquiry forms, Important Links.
- Dynamic sitemap, search and filtering features.

4.2.2 CMS Capabilities

- Role-based CMS: Admin, Editor, Viewer, with possibility to extend roles.
- CRUD for pages, posts, media, menus.
- Content scheduling and version history.
- Bilingual content management (per-page language variants).
- SEO fields (meta title, description, canonical URL), support for analytics and tracking codes.
- Media library with image optimization and alt-text tagging.
- Staging/preview before publish.

4.2.3 Social Media & Feeds

- Manual content entry for Shareholders / ASYAD by Media Department.
- Automated news/updates feed from social platforms (Instagram, X/Twitter, LinkedIn) into News/Media section or dedicated widgets, using WordPress plugins or custom connectors.
- Optional embedding of social timelines on home and relevant sections.

4.2.4 Careers & Training

- Careers listing page with filters (department, location, type).
- Job detail page with suggested fields:
    - Job Title, Reference Code.
    - Department.

    - Location.
    - Employment Type (Full-time/Part-time/Contract).
    - Closing Date.
    - Description & Responsibilities.
    - Required Qualifications & Experience.
- Application Form (per job) – example fields:
    - Full Name (required).
    - Email (required, email format).
    - Mobile Number (required).
    - Nationality.
    - Current Country.
    - Current Employer (optional).
    - Years of Experience (numeric).
    - Position Applied For (auto-filled from job).
    - Expected Salary (optional).
    - Notice Period (dropdown).
    - Cover Letter (textarea).
    - Attachments:
        - CV / Resume (PDF/DOCX required).
        - Cover Letter (optional).
        - Certificates / Portfolio (optional; multiple files allowed).
- Workflow:
    - Submission generates an application record and unique reference.
    - Email notification to HR/assigned mailbox.
    - Email acknowledgment to applicant.
    - HR can change status: Under Review, Shortlisted, Rejected, On Hold, Hired.
    - Status change triggers email with template (acceptance/shortlist/rejection).

5. Vendor Registration & Approval System

5.1 Objectives

- Digitize vendor onboarding and approval.
- Support Paid Vendor Registration with variable fee per Vendor Group (SME/Local/International).
- Allow multiple contacts per vendor, with one Super Admin per vendor account.
- Ensure structured data capture and documents as per Vendor Registration Information form.

5.2 User Roles

- **Vendor Super Admin (Company)**
  - Manages the vendor account and can add/remove company users.
- **Vendor User**
  - Can view and edit profile (if permitted), upload documents, respond to update requests.
- **Procurement Admin**
  - Reviews and approves/rejects vendors; manages vendor groups, fees, validity periods.
- **Finance User (optional, configurable)**
  - Views paid/unpaid registrations, payment reports.
- **System Admin (IT)**
  - Configuration, user management, integration setup.

5.3 Vendor Registration Data Model

Based primarily on the Vendor Registration Information form.

Core Company Information:

- Vendor Name (required).
- Legal Type (e.g., LLC, SAOC) (required).
- Address, Country, City, Region (required).
- Post Box, Postal Code.

Communication & Contacts:

- Phone No.
- Fax No.
- Mobile No.
- Email 1 (required).
- Email 2 (optional).

- Contact Person Name (required).
- Designation (required).
- Multiple Contacts (list of: Name, Designation, Email, Mobile, Role).

Registration & Credentials:

- CR No (Commercial Registration) + Issue Date + Expiry Date (required).
- Chamber of Commerce No + Issue Date + Expiry Date.
- Riyada Card No + Issue Date + Expiry Date (mandatory for SMEs).
- Any other credentials (text, attachments).
- Currency (default OMR + others if needed).
- Payment Terms.

Bank Details:

- Bank Name.
- Bank Branch.
- Account No.
- Swift Code.
- Supporting document: Bank details in company letterhead signed by authorized signatory.

Products/Services & Specialties:

- Product/Service Range (free text + linked to categories).
- Supplier Groups (SME, Local, International, etc.).
- Vendor Specialties (multi-select categories relevant to POD procurement categories).

Branches:

- Branch 1 / 2 / 3: Address, Contact details.

Attachments Required:

- Valid Commercial Registration (full set).
- Chamber of Commerce Certificate.
- Riyada Card (mandatory for SMEs).
- Bank details letter.
- ID Copy of Authorized Signatory.
- Client List.

- Any credential certificates.
- Full company profile.
- Agency list.
- Last 3 years' audited financial statements.
- Any other document.

5.4 Registration & Approval Workflow

1. **Account Creation:**
    - Vendor Super Admin registers with:
        - Company Name, CR No, Email, Password.
    - OTP verification via email.
    - Account status: **New**.
2. **Profile Completion:**
    - Vendor logs in, completes all mandatory fields and uploads documents.
    - Selects Vendor Group (SME/Local/International etc.).
    - System calculates Registration Fee based on group (configurable fee matrix).
3. **Payment:**
    - Vendor initiates payment via Bank Muscat Smart Gateway.
    - Fee varies by Vendor Group, configured by Procurement Admin.
    - On successful payment, status: **Submitted (Paid)**.
    - If payment fails, allow retry; status: **Pending Payment**.
4. **Procurement Review:**
    - Procurement Admin reviews profile, documents, and classification.
    - Actions:
        - **Approve** – Vendor gets Approved status with Validity dates.
        - **Reject** – Vendor rejected with reason (captured in log and email).
        - **Revise** – Return to vendor for missing/incorrect data.
    - Email notifications to vendor for each action.
5. **Expiry & Renewal:**
    - System tracks CR, Chamber, Riyada, and registration validity dates.

    - Automated reminders (e.g., 90/60/30 days before expiry).
    - Renewal optionally re-triggers payment depending on rules (configurable).

6. **Vendor Updates:**
    - Vendor can request updates to profile; certain fields may trigger re-approval (e.g., change of legal name or bank account).
    - Procurement sees a “Profile Update Pending Approval” queue.

5.5 Reports (Vendor Module)

- Vendor Master List (filter by group, status, category, country).
- Expiring Documents Report (CR, Chamber, Riyada, etc.).
- Payment & Revenue Report by vendor group & period.
- Vendor Performance / Evaluation (linked from Tender performance scoring if implemented).
- Export to Excel/CSV & PDF.

6. Tender / RFP Management System

6.1 Objectives

- Manage tender lifecycle from request to announcement, clarifications, bid submission (if online), evaluation, and status tracking.
- Support manual steps where required (e.g., manual bid opening form, contract generation outside system).
- Include specialized 3-Key Bid Opening security mechanism.

6.2 Roles

- Tender Requester (Department User).
- Procurement Officer.
- Finance (for budget verification).
- Technical Evaluation Team Members.
- Commercial Evaluation Team Members.
- Tender Committee / ITC Members (3-Key Bid Opening).
- Vendor (Bidder).
- System Admin.

6.3 Key Forms & Data

6.3.1 Tender Request Form (Internal)

Fields:

- Tender Reference (auto-generated by system or by Procurement).
- Requester Name.
- Date of Request.
- Department.
- Department Manager Signature info (digital equivalent).
- Budget Assigned in OMR.
- Tender Fees (Budget x 0.05% – auto-calculated).
- Budget Verification by Finance (user, date).
- Estimation Based on Previous History (text/amount).
- Subject.
- Brief Description.
- Tender Announcement: Local / International.
- Tender Type: Open / Close.
- If Close: List of suppliers (linked to vendor database).
- Evaluation Method: Technical & Financial Separate / Combined.
- Evaluation Criteria: e.g., Technical 70%, Commercial 30%.
- Technical Evaluation Team (list of users).
- Financial (Commercial) Evaluation Team (list of users).
- Tender Committee (ITT) details (Chairman, Members, Secretary).

6.3.2 RFQ / RFP Form (External Facing)

Fields from RFQ document:

- RFQ No, RFQ Date.
- PR No.
- Item Lines: Sr No, Description, UOM, Qty, Unit Price, Brand.
- Bid Closing Date.
- Delivery Location / INCOTERM.
- Material Required On (Date).

- Terms & Conditions reference (PODC GTC).
- Notes & enclosures.

6.3.3 Bid Opening Form

- Tender Number, Tender Title, Tender Budget.
- Opening Date, Submission Date, Time & Place.
- Supplier Bids: Supplier Name, Total, Comments.
- Attendance and Signatures of ITC Members (Chairman, Members, Secretary).

6.4 Tender & RFP Lifecycle Workflow

High level:

1. **Pre-Tender Request (Internal):**
    - Department submits Tender Request Form.
    - Finance verifies budget.
    - Tender Committee approves initiation.
2. **Tender Setup (Procurement):**
    - Procurement creates Tender in system using approved request data.
    - Defines:
        - Tender Type (Open/Close).
        - Announcement details.
        - Timeline (issue date, clarification periods, closing date).
        - Fees (if any).
        - Evaluation method and criteria weights.
        - Technical & Commercial evaluation teams.
    - For Close tenders, select invitee vendors from vendor database.
3. **Announcement & Distribution:**
    - Tender Announcement generated (internal template) with:
        - Tender scope summary.
        - Important dates.
        - Instructions.

- Publish on website (for Open) and/or send notifications/emails to selected vendors (Close).
- Attach relevant documents (RFP, BOQ, drawings, etc.).
- Access-control: Vendors may need to login to tender portal to download documents (time-limited URLs, e.g., 72 hours).

4. **Clarifications / Circulars / Site Visits / Extensions:**
    - Vendors can submit clarification questions online (if portal-based) or record manually in the system.
    - Procurement can issue:
        - Clarification responses.
        - Circulars / addenda.
        - Site visit notices.
        - Extensions of bid closing date.
    - System logs all communications and updates and optionally sends to all participants.
5. **Bid Submission:**
    - Depending on scope:
        - **Option A:** Vendors submit bids via portal with separate technical and commercial documents.
        - **Option B:** Bids remain partially manual, with system recording who has submitted and key metadata.
    - Technical & commercial offers stored separately and access-controlled.
6. **3-Key Bid Opening (Commercial Proposals):**
    - Commercial bids cannot be opened unless at least three Tender Board/ITC Members are logged in simultaneously.
    - System generates three unique codes at the moment of the meeting; each code:
        - Is displayed to one Board Member.
        - Has a time limit (e.g., 5 minutes).
    - Each Member must enter:
        - Their own code, and
        - The other two codes (so that all three codes are validated and cross-checked).

- Only when all three sets are correctly entered within the time window does the system unlock commercial bids for viewing.
- All actions (time, IP/device, user ID) are logged.

7. **Technical Evaluation:**
    - Technical proposals are assigned to Technical Evaluation Team with an evaluation deadline.
    - Evaluators can:
        - Score each technical proposal against defined criteria.
        - Upload evaluation documents.
        - Record comments.
    - Status per bid: **Technical Accepted / Rejected**.
8. **Commercial Evaluation:**
    - After Technical acceptance, Commercial Committee reviews commercial bids.
    - They can:
        - Record commercial scores/prices.
        - Shortlist top-ranked vendors.
    - Commercial proposals may also need manual sign-off by three committee members (system records digital approvals + manual signatures on generated forms if required).
9. **Performance Evaluation (Post-Project):**
    - For awarded vendors, performance scoring can be recorded:
        - Based on profile (capability, compliance).
        - Based on project execution (timeliness, quality).
    - Multiple projects and cumulative scoring supported.
10. **Award & Regret Letters:**
    - Award decision is manual (outside algorithm).
    - Once decided, Procurement:
        - Updates Tender status to **Awarded** and selects awarded vendor.
        - System generates:
            - Award notification email to awarded vendor.
            - Regret letters to non-awarded vendors.

        - Optional internal awarding note.

11. **Cancellation & Retendering:**
    - **Cancellation:**
        - Procurement sets status to **Cancelled**.
        - System generates cancellation letter/email to all participants.
    - **Retender:**
        - System can clone original tender (data, vendors, documents) into a new tender record, with:
            - New reference and new dates.
            - Option to include previous participants automatically.
        - Vendors may be required to submit new bids (as configured).

6.4.1 RFP Issuance & Vendor Notification Process

For RFQ/RFP processes where evaluation and negotiation remain largely **manual**, the system will support PODC as follows:

- PODC users (Procurement) will:
    1. **Create the RFP details** in the system, including:
        - RFP title and reference.
        - Description / scope of work.
        - Key dates (issue date, clarification deadline, submission deadline).
        - Any commercial/technical notes.
    2. **Attach relevant RFP documents**, such as:
        - RFP / RFQ document.
        - BOQ, drawings, specifications.
        - Any annexes or required forms.
    3. **Select the target vendors** to invite, using:
        - Vendor Group (e.g., SME, Local, International).
        - Vendor Category / Speciality.
        - Specific vendors individually (manual selection).
    4. **Send RFP notifications**:

        - The system sends RFP invitation emails to the selected vendors, including:
            - Summary details.
            - Download links or instructions for accessing documents.

- After these steps, **the commercial/technical process continues manually outside the system** (e.g., offline evaluation, negotiations, contract drafting), as per PODC's internal procedures.
- Within the system, PODC will still be able to:
    - **Track and update the status of each RFP**, e.g.:
        - Draft, Issued, Under Evaluation, Cancelled, Awarded.
    - **Record which vendors responded** and basic notes (e.g., bid received / declined / no response).
    - **Mark an RFP as Awarded** and select which vendor has been awarded, for:
        - Reporting and audit trail.
        - Generating optional award/regret notifications from within the system.

This ensures the RFP issuance and vendor communication are system-driven, while the detailed evaluation and contracting remain flexible and manual as requested.

6.5 Notifications & Letters

System-generated templates (configurable):

- Tender Request approval/rejection.
- Tender announcement notice.
- Clarification & circulars.
- Bid closing reminders.
- Bid opening invitations and reminders.
- Regret letters.
- Cancellation letters.
- Bid extension letters.
- Tender request letters.

These should be configurable as email templates, and optionally downloadable as PDF letters.

6.6 Reports (Tenders)

- Tender Register (all tenders, status, type, budget, department).
- Tenders by Department and by Status.

- Bidder Participation Report.
- Evaluation Summary (technical & commercial).
- Vendor Performance reports (per vendor, aggregated).
- Timeline dashboards (average time per stage).

7. Gate Pass Management System

7.1 Objectives

- Digitize visitor/contractor access control via online gate pass requests.
- Provide clear approval chain: **Requester → Concerned Department/Subsidiary → Commercial (if waived) → Security → ROP → Requester**.
- Support QR-based gate pass verification within POD network.

7.2 Roles

From Gate Pass Requirements and Technical Proposal:

- Visitor / Requester (external user).
- Department User (per company/department – PODC, ATD, ACT, etc.).
- Commercial Department User.
- Security Officer.
- ROP Officer.
- Subsidiary Admins for:
    - Port of Duqm (PODC) – Operations, IT, Commercial, Administration, Maintenance, Planning & Technical, Procurement, CEO, HSE.
    - Asyad Terminal Duqm – ATD (Operations, Admin, Maintenance, HSE).
    - Asyad Container Terminal – ACT (Operations, Admin, Maintenance, HSE).
- System Admin (IT).

7.3 Account Registration & Login

From Gate Pass Requirements.

First-time Account Registration (Visitor):

- Fields:
    - Username (no special characters, unique).

    - First Name, Last Name (no special chars).
    - Email (correct format, unique).
    - Phone Number (with country code; used for OTP; user can choose OTP via email or phone).
    - Emergency Number.
    - Password & Confirm Password (with policy).
    - CAPTCHA.
- OTP-based activation via email or phone.
- After activation, user can log in.

Visitor Login Screen:

- Username, Password.
- "Forgot Password" – reset via OTP/email.
- Link to User Guide.

7.4 Gate Pass Request Fields

From Gate Pass Requirements + Drop Down List.

New Request:

- Ticket / Reference Number (auto-generated).
- Group / Individual Pass (selection).
- Date of Visit From / To (max 1 year validity).
- Requestor Name (auto from account).
- Requestor Email, Mobile.
- Visitor Company (external company name).
- Visitor Company to be integrated with Vendor, and automatically waive the fees if applicable.
- Visiting Company Department:
    - Company: PODC / ATD / ACT.
    - Department (per company: Operations, IT, Commercial-Land, Commercial-Port, Administration, Maintenance, Planning & Technical, Procurement, CEO, HSE, etc.).
- Visitor Coordinator (In-house contact).

- Purpose of Visit (dropdown from list, e.g. for Agents/Suppliers: Loading cargo, Unloading cargo, Refuelling, Maintenance, Crew change, Customs, etc.; for Visitors/Tourists: Educational, Business meetings, Photography/Research, etc.).
- Vehicle Type (Private, Commercial, etc)
- Table of Visitors (for each person):
    - Full Name.
    - ID/Passport Number.
    - Vehicle Number (if applicable).
    - Visitor Company.
    - Attachment: ID/Passport (file).
    - VISA Type (dropdown).
    - Attachment: Driving License (if vehicle present).

System restrictions:

- If existing gate pass is still valid, user is **not allowed** to request a new one for same person/vehicle (rule at Commercial level).
- Registered email cannot be duplicated.

Menu:

- Request List (view history with payments).
- My Profile (edit email, phone, change password).

7.5 Gate Pass Workflow

1. **Visitor / Requester:**
    - Registers → logs in → creates gate pass request → saves/submits.
2. **Concerned Department (PODC/ATD/ACT etc.):**
    - Sees new requests in Department Dashboard.
    - For each request:
        - View details.
        - Actions: Accept, Return with Justification, Reject.
    - Comment/remarks mandatory on Return/Reject.
    - If Approved → request goes to Commercial.
3. **Commercial Department:**

- Reviews request:
    - Review waived gate passes for final approval.
    - Validates existing valid passes (no duplicate overlapping passes).
- Actions: Accept / Return with justification / Reject.
- Handles payment issues (flagged requests).
- Has reporting access.

4. **Security Department:**
    - Reviews requests approved by Commercial.
    - Can:
        - Accept / Return / Reject.
        - Block / Unblock visitors.
    - Adds remarks per decision.
5. **ROP Officers:**
    - Final review of visitors:
        - Accept / Reject.
        - Block / Unblock visitors for security reasons (e.g., background issues, visa issues; some visas auto-rejected so system should validate before sending to ROP when possible).
    - Comments/remarks required.
    - When all approvals in chain are complete → request reaches final **Approved** status.
6. **Gate Pass Generation:**
    - Once approved, the system:
        - Generates Gate Pass Document (PDF) with all details + QR code.
        - QR code links to internal verification URL accessible only within POD network (intranet/VPN).
    - Security/ROP staff at gate scan QR using intranet-connected devices to see:
        - Visitor details, photo/ID preview, vehicle details, validity.
        - Status (Active, Expired, Blocked).
7. **Validity & Expiry:**
    - Maximum validity: 1 year.

    - After expiry, pass is automatically invalid, visible in history list.

7.6 Ticketing System (Support for Gate Pass)

- Purpose: Help Desk feature for users and POD staff to:
    - Report issues (login problems, payment issues, request stuck).
- Basic features:
    - Create ticket (category, description, attachments).
    - Auto-assign to Gate Pass Support / IT.
    - Track status (Open, In Progress, Resolved, Closed).
    - Email notifications on updates.

7.7 Search & Filters

- For Department, Commercial, Security, ROP dashboards:
    - Search by any field (name, ID, company, ticket no, date, vehicle no, status).
    - Filters: Company, Department, Status, Date range, Visit Type.
- Address user pain point: “difficulty in search within groups”.

7.8 Reports (Gate Pass)

- Requests by status, department, date range.
- Visitors’ history (per person, company, vehicle).
- Blocked Visitors list.
- Payment/fee reports (if gate pass is linked to fees).
- Approvals time statistics per role.

8. Permit to Work – HSSE Module (PTW)

8.1 Objectives

- Digitize and automate paper-based permit issuance (PODC-HMO-014-FOM).
- Improve efficiency, compliance, traceability, and communication for work permits.
- Ensure all mandatory data, attachments, and hazard assessments are completed before approval.

8.2 Technology & Integration

- Built using PHP (Laravel/CodeIgniter) + MySQL, sharing same hosting stack as other modules.

- Integrated with common user management (for POD staff) and email notifications.

8.3 PTW Workflow

From PTW BRD:

1. **Submission (Company / Contractor):**
    - Company fills in PTW application form.
    - On Submit:
        - Application ID generated.
        - Email with final form (PDF preferred) sent to HSSE
        - Status: **Submitted**.
2. **HSSE Review:**
    - HSSE Staff reviews application:
        - Approve → go to HMO review.
        - Reject → final rejection.
        - Revise → send back to company with reasons.
    - Status: **APPROVED / REJECTED / REVISE**.
3. **HMO Review:**
    - HMO (Marine/Operations) review:
        - Approve → go to Terminal Operator.
        - Reject → final rejection.
4. **Terminal Operator Review:**
    - Terminal Operator final site/ground approval:
        - Approve → Permit Issued.
        - Reject → final rejection.
5. **Notification:**
    - System sends final status notification to applicant company for Approve/Reject.
    - For any status change (APPROVE, REJECT, REVISE), automated email notification is mandatory.

8.4 Core Form Fields

(High-level summary; system must digitally capture all fields from the original form.)

Section 1: Details of Permit Applicant

- Company Name (required).
- Applicant Name (required).
- Applicant Position (required).
- Contact Number (required, numeric).
- Email (required, email format – used for all notifications).

Section 2: Scope of Works

- Work Description (multi-line text, required).
- Starting Date/Time (required).
- Completion Date/Time (required, must be ≥ start).
- Total duration in days (auto-calculated but displayed).
- Work Location (required).
- Work Supervisor Name (required).
- Supervisor Contact Details.
- Total Number of Workers (numeric, > 0).

Section 3: Hazards & Attachments (Checklists + Uploads)

- Checklist of required documents:
    - Risk Assessment (mandatory; file upload).
    - Scope of Work (conditional).
    - Job Safety Analyses (conditional).
    - MSDS (conditional).
    - Method Statement (conditional).
    - Base (Cold) Work Permit (mandatory).
    - Hot Work Permit, Confined Space Entry, Excavation Certificate, Working at Height Certificate, Diving Log, Electrical/Mechanical Isolation, Toolbox Talk, Other (each with checkboxes and conditional file uploads).
- File types: PDF/DOCX/Image.

Section 4: Proposed PPE (Checklist)

- PPE Categories with items (Helmet, Safety Shoes, Safety Glasses – mandatory; others optional).

- Each item uses a checkbox; some with additional text field (for “Other”).

Section 5: Work Area Preparations (Checklist & Text)

- Preparatory precautions (Lock-out-tag-out, Warning signs, Area barricaded, etc.).
- Specific hot work precautions (Area free of flammable material, Fire hose standby, Gas monitoring, etc.).
- “Specify medium” and “Other” fields where applicable.

Section 6: Declaration & Signature

- Single “I Agree” acceptance for required declarations.
- Name (Responsible Party), Function, Date (auto-filled), Signature (digital capture or upload) – all required.

Section 9: Planned Area of Work – Interactive Map

- Display Port of Duqm Master Plan map (provided by PODC).
- User can mark/select precise location.
- System stores coordinates/sector name/location description with the application record.

8.5 POD Staff Review Panels (Sections 7 & 8)

- Restricted to HSSE, HMO, and Terminal Operator roles.
- For each stage, capture:
    - Application received on (datetime).
    - Application completed on (datetime).
    - Application reviewed by (name/ID of reviewer).
    - Status change reason (mandatory for Reject/Revise).
- Maintain a complete audit trail for each status change.

8.6 Notifications & Audit

- Initial email with PDF to HSSE.
- Automated emails to applicant on every status change.
- All actions logged in audit table (Application ID, user, action, date/time).

9. Reporting & Analytics (All Modules)

Across modules (Vendor, Tender, Gate Pass, PTW), the system should support:

- Tabular reports with filters (date range, status, department).
- Export to PDF and CSV where appropriate.
- Dashboards summarizing:
    - Number of active vendors, tenders, gate passes, permits.
    - Average processing times per stage/department.
    - Top reasons for rejection (Gate Pass, PTW).
    - Performance scores by vendor (if performance evaluation implemented).

The website will use Google Analytics and similar tools to track traffic, user behavior, and conversions.

10. Non-Functional Requirements

10.1 Performance

- Responsive design across devices and browsers (Chrome, Edge, Safari, Firefox, etc.).
- Optimized image loading and caching.
- Reasonable page load time within PODC network and public internet.

10.2 Availability & DR

- Hosted on PODC infrastructure with backup and DR meeting targeted RTO/RPO (~2 hours).

10.3 Security

- As per Section 2.3 (OWASP, SSL/TLS, WAF, etc.).
- No third-party script/CDN dependencies; assets self-hosted.

10.4 Usability

- Clear, consistent UI/UX.
- Arabic RTL support.
- Tooltips and contextual help where complex workflows exist.
- User guides (PDF) embedded/linked (especially for Gate Pass, PTW, etc.).

11. Assumptions & Dependencies

- PODC will provide:
    - All branding guidelines, logos, and final content.
    - SMS/OTP gateway access (if SMS OTP is used beyond email OTP).

    - Access to test and production servers.
    - Payment gateway credentials (Bank Muscat Smart Gateway).
- Third-party security evaluation will define final WAF rules and any additional hardening.
- Any scope change after BRD sign-off will follow formal change request process.

12. High-Level Process Diagrams (Textual)

12.1 Website & CMS (Content & Careers)

12.1.1 Content Publishing Flow

Actors: Media/CMS Editor, CMS Admin, Website Visitor, System

1. **Media Editor**
   1.1 Drafts new page/post (e.g., news, project, service page).
   1.2 Uploads media (images, PDFs, videos) and assigns categories/tags.
2. **System (WordPress CMS)**
   2.1 Saves draft content.
   2.2 Provides preview link for internal review.
3. **CMS Admin / Approver**
   3.1 Reviews draft content for quality, branding, and language.
   3.2 Approves and publishes content (or sends back to editor with comments).
4. **System**
   4.1 Publishes content to the live website.
   4.2 Updates sitemap / menus where applicable.
   4.3 Triggers any configured social or RSS feeds (if applicable).
5. **Website Visitor**
   5.1 Browses website and views updated content on desktop or mobile.

12.1.2 Careers Application Flow

Actors: Job Applicant, HR User, System

1. **Job Applicant**
   1.1 Opens Careers page and views job listing.
   1.2 Selects a job and fills application form (personal details, CV, attachments).
   1.3 Submits application.
2. **System**
   2.1 Validates mandatory fields and file types.
   2.2 Creates application record and unique reference.
   2.3 Sends confirmation email to applicant.
   2.4 Sends notification email to HR/assigned mailbox.
3. **HR User**
   3.1 Logs into CMS / application backend.
   3.2 Reviews application and changes status (Under Review / Shortlisted / Rejected / On Hold / Hired).

4. **System**
   4.1 Stores status change and audit log.
   4.2 Sends email to applicant based on status (e.g., shortlist / rejection template).

12.2 Vendor Registration & Approval – High-Level Process

Actors: Vendor Super Admin, Vendor User, Procurement Admin, Finance User, System, Payment Gateway

1. **Vendor Super Admin – Registration**
   1.1 Navigates to Vendor Registration portal.
   1.2 Enters company name, CR number, email, and password.
   1.3 Submits registration form.
2. **System – Account Creation**
   2.1 Validates uniqueness of email and CR.
   2.2 Creates vendor account with status = **New**.
   2.3 Sends OTP/email verification link.
3. **Vendor Super Admin – Activation & Profile**
   3.1 Activates account via OTP/link.
   3.2 Logs in and completes full vendor profile (company info, bank details, specialties, attachments).
   3.3 Selects appropriate Vendor Group (SME/Local/International).
4. **System – Fee Calculation & Payment**
   4.1 Calculates registration fee based on Vendor Group.
   4.2 Presents fee summary and "Pay Now" option.
   4.3 Redirects to Payment Gateway (Bank Muscat).
5. **Vendor / Payment Gateway**
   5.1 Vendor enters card / payment details.
   5.2 Payment Gateway processes transaction and returns success/failure to system.
6. **System – Post-Payment**
   6.1 If payment successful → set status to **Submitted (Paid)** and notify Procurement.
   6.2 If payment fails → status remains **Pending Payment**, vendor can retry.
7. **Procurement Admin – Review & Decision**
   7.1 Reviews profile data, documents, classification, and risk.
   7.2 Action:
   - Approve → set status **Approved** with validity dates.
   - Reject → set status **Rejected** with reason.
   - Revise → send back for correction.
8. **System – Notifications & Tracking**
   8.1 Sends email to vendor with decision and comments.
   8.2 Tracks expiry dates for CR, Riyada, registration, etc.
   8.3 Sends scheduled reminders (90/60/30 days before expiry).

9. **Vendor & Procurement – Renewal / Updates**
   9.1 Vendor submits updates or renewal request (may involve new payment).
   9.2 Procurement reviews & re-approves changes as required.

12.3 Tender / RFP Management – High-Level Process

Actors: Department Requester, Finance, Procurement Officer, Technical Team, Commercial Team, Tender Board/ITC, Vendors, System

12.3.1 Tender Lifecycle Flow

1. **Department Requester**
   1.1 Logs into Tender System.
   1.2 Fills Tender Request Form (scope, budget, evaluation method).
   1.3 Submits for approval.
2. **Finance User**
   2.1 Reviews budget and financial details.
   2.2 Approves or rejects request (with comments).
3. **Procurement Officer – Tender Setup**
   3.1 Converts approved request into a Tender record.
   3.2 Sets tender type (Open/Close), dates, fees, evaluation weights.
   3.3 Assigns Technical and Commercial evaluation teams and ITC members.
   3.4 Uploads RFQ/RFP documents.
4. **System – Announcement & Vendor Communication**
   4.1 Publishes tender on website (for open tenders).
   4.2 Sends invitations/emails to selected vendors (for closed tenders).
   4.3 Provides secure access to tender documents (time-limited URLs).
5. **Vendors – Bid Submission**
   5.1 Receive invitation / view tender details.
   5.2 Prepare and submit technical and commercial proposals (online or offline as defined).
   5.3 System logs bids as received.
6. **Tender Board – 3-Key Commercial Bid Opening**
   6.1 At scheduled time, three ITC members log in.
   6.2 System displays one unique code to each member (time-limited).
   6.3 Each member enters all three codes.
   6.4 If all codes match within time frame → commercial bids are unlocked.
   6.5 System logs all actions.
7. **Technical Evaluation Team**
   7.1 Reviews technical proposals.
   7.2 Scores each proposal and uploads evaluation sheets.
   7.3 Marks each bid as **Technical Accepted/Rejected**.

8. **Commercial Evaluation Team**
   8.1 Reviews commercial proposals for technically accepted bids.
   8.2 Compares prices and commercial conditions.
   8.3 Recommends preferred vendor(s).
9. **Procurement / Tender Board – Award Decision**
   9.1 Conducts final review and selects winning vendor.
   9.2 Updates tender status to **Awarded** and records award decision.
10. **System – Notifications & Post-Award**
    10.1 Sends award notification email to winning vendor.
    10.2 Sends regret letters to unsuccessful vendors.
    10.3 Keeps record for future vendor performance assessments.

12.3.2 RFP Issuance & Manual Evaluation Flow

Actors: Procurement Officer, Vendors, System

1. **Procurement Officer**
   1.1 Creates RFP record in system (title, description, dates).
   1.2 Attaches RFP documents (RFP, BOQ, drawings, etc.).
   1.3 Selects target vendors by:
   - Vendor Group,
   - Category/Speciality, or
   - Specific vendors manually.
2. **System – Email Distribution**
   2.1 Sends RFP invitation emails to selected vendors.
   2.2 Provides links/instructions to access RFP documents.
3. **Vendors**
   3.1 Receive email invitations.
   3.2 Download documents and prepare proposals offline.
   3.3 Submit their offers through agreed (manual) channels outside the system.
4. **Procurement Officer**
   4.1 Receives and evaluates offers manually (outside system).
   4.2 Updates RFP status in system (Under Evaluation / Cancelled / Awarded).
   4.3 Records awarded vendor in system once decision is made.
5. **System – Tracking & Reporting**
   5.1 Stores RFP status history.
   5.2 Provides reports on issued RFPs, invited vendors, response status, and awarded vendor.

12.4 Gate Pass Management – High-Level Process

Actors: Visitor/Requester, Department Approver, Commercial Department, Security, ROP, System

1. **Visitor / Requester – Registration & Request**
   1.1 Registers an account (username, email, phone, OTP verification).
   1.2 Logs in and creates new Gate Pass request (visitor details, host company/department, purpose).
   1.3 Submits request.
2. **System – Initial Checks**
   2.1 Validates mandatory fields and file attachments (ID, Visa, Driving License if vehicle).
   2.2 Checks for existing active pass for same person/vehicle (where configured).
   2.3 Routes request to Concerned Department/Subsidiary.
3. **Concerned Department / Subsidiary Admin**
   3.1 Reviews request details.
   3.2 Approves, Returns with comments, or Rejects.
   3.3 If Waived → request moves to Commercial.
4. **Commercial Department**
   4.1 Approved waived gate passes by the other departments.
   4.2 Validates no duplicate overlapping passes.
   4.3 Approves, Returns, or Rejects.
   4.4 If Approved → request moves to Security.
5. **Security Department**
   5.1 Reviews security aspects (blacklist, risk).
   5.2 May Block or Unblock visitors in system.
   5.3 Approves, Returns, or Rejects.
   5.4 If Approved → request moves to ROP.
6. **ROP Officers**
   6.1 Review visitor / visa details.
   6.2 Approve or Reject; may Block visitor based on background/visa policies.
   6.3 Final Approved status triggers pass issuance.
7. **System – Gate Pass Issuance**
   7.1 Generates Gate Pass document (PDF) with QR code.
   7.2 QR code points to secure internal URL (POD network only).
   7.3 Sends email notification to Requester with pass or rejection reason.
8. **Security / ROP at Gate**
   8.1 Scans QR code using intranet-connected device.
   8.2 System displays visitor and vehicle details, validity, status (Active/Expired/Blocked).
   8.3 Allows or denies entry accordingly.
9. **Ticketing / Help Desk (Optional Flow)**
   9.1 User raises ticket for issues (login/payment/request).
   9.2 IT/Support reviews and resolves ticket.
   9.3 System updates ticket status and notifies user.

12.5 HSSE Permit to Work (PTW) – High-Level Process

Actors: Contractor/Applicant, HSSE Reviewer, HMO Reviewer, Terminal Operator, System

1. **Contractor / Applicant**
   1.1 Accesses PTW portal and fills application (scope, duration, work location, workers).
   1.2 Uploads mandatory HSE documents (risk assessment, method statements, permits, etc.).
   1.3 Completes PPE and work area preparation checklists.
   1.4 Accepts declaration and submits application.
2. **System – Submission**
   2.1 Validates mandatory fields and documents.
   2.2 Generates Application ID.
   2.3 Sends email to HSSE (with PDF copy).
   2.4 Sets status to **Submitted**.
3. **HSSE Reviewer**
   3.1 Reviews documents, risk assessments, and controls.
   3.2 Approves, Rejects, or Sends for Revision.
   3.3 Adds comments / conditions if needed.
4. **System – HSSE Decision**
   4.1 Updates status (HSSE Approved / Rejected / Revise).
   4.2 If Revise or Reject → notifies applicant with comments.
   4.3 If Approved → routes to HMO.
5. **HMO Reviewer**
   5.1 Reviews from operational/Marine perspective.
   5.2 Approves or Rejects.
6. **System – HMO Decision**
   6.1 Updates status (HMO Approved / Rejected).
   6.2 If Rejected → notifies applicant (final).
   6.3 If Approved → routes to Terminal Operator.
7. **Terminal Operator**
   7.1 Conducts final site/ground review.
   7.2 Approves or Rejects.
8. **System – Finalisation**
   8.1 If Approved → marks permit as **Permit Issued** and notifies contractor.
   8.2 If Rejected → notifies contractor with reason.
   8.3 Logs all status transitions in audit trail (user, time, action).
9. **Reporting & Follow-Up (HSSE / HMO / Terminal)**
   9.1 Generate reports of active, expired, and rejected permits.
   9.2 Track common reasons for rejection and types of work by area.

12. Detailed Sitemap

This sitemap merges:

12.1 Main Navigation (Top Level)

1. Home
2. About Our Port
3. **Port Services**
4. **Terminals & Shipping Lines**
5. **Investments & Strategic Industries**
6. **Sustainability & Decarbonization 2050**
7. **SMEs & Local Content**
8. **News, Events & Social Media**
9. **Shareholders & Partners** (e.g., ASYAD)
10. **Careers & Training**
11. E-Services
12. Contact & Support
13. Language Switch (EN / AR)

12.2 Home

- Hero banner (rotating campaigns: Investments, Sustainability, Port Services, SMEs).
- Quick tiles linking to:
    - **Investments & Strategic Industries**
    - **Sustainability & Decarbonization 2050**
    - **Port Services**
    - **SMEs & Local Content**
    - **Careers & Training**
- Highlight strip: **Green Steel**, **Hydrogen**, **Ras Markaz**, **Duqm Freezone** (with “Learn more” links to detailed pages below).
- Snapshots:
    - Latest **News / Events / Social Posts**

    - Key metrics (ship calls, cargo throughput, terminal capacities).
- Mini interactive map → full “Port Map / Terminals” page.

12.3 About Our Port

URL example: /about-our-port/

- **Overview**
    - Who We Are
    - Our History & Milestones
    - Port of Duqm in SEZAD Context (link to Duqm Freezone / SEZAD site)
- **Leadership & Governance**
    - Chairman’s Message
    - Board of Directors
    - Executive Management
    - Corporate Governance & Policies
- **Our Vision & Strategy**
    - Vision, Mission & Values
    - Strategic Pillars (Logistics Hub, Energy Hub, Industrial Gateway)
- **Safety, Security & HSSE**
    - Port Safety Overview
    - Security & ISPS Code
    - HSSE Framework
- **Port Master Plan**
    - Port Layout & Basins
    - Development Phases

12.4 Port Services *(Key Focus Area)*

URL example: /port-services/

- **Port Services Overview**
    - Summary of all services with links into detailed pages

- **Marine & Nautical Services**
  - Pilotage
  - Towage & Mooring
  - Vessel Traffic Services (VTS) / Nautical Control
  - Anchoring & Waiting Areas
  - Nautical Information (charts, approach, weather, notices)
- **Cargo & Logistics Services**
  - General Cargo Handling
  - **Terminals and Shipping Lines** (summary + link to dedicated section)
  - Container Services
  - Ro-Ro & Automotive
  - Dry Bulk & Liquid Bulk Services
  - Project Cargo & Heavy Lift
- **Support & Value-Added Services**
  - Bunkering & Fuel
  - Fresh Water Supply
  - Waste / Sludge Reception
  - Warehousing & Storage
  - Ship Repair & Drydock (Asyad Drydock reference)
- **Procedures & Forms**
  - Port Rules & Regulations (link to detailed page)
  - Vessel Arrival / Departure Procedures
  - Operational Forms Download Center
- **Tariffs & Calculators**
  - Tariff Overview
  - PDF Tariff Sheets
  - Online Tariff Calculator (if applicable)

12.5 Terminals & Shipping Lines *(Key Focus Topic)*

URL example: /terminals-shipping/

- **Terminals Overview**
  - Map of terminals & basins
  - Key capacities & technical data
- **Container Terminal**
  - Facilities & Equipment
  - Yard & Gate Operations
  - Service Levels & KPIs
- **Multi-Purpose / General Cargo Terminal**
  - Cargo Types
  - Storage & Warehousing
- **Bulk Terminals**
  - Dry Bulk Terminal (e.g., minerals, aggregates)
  - Liquid Bulk Terminal (incl. Ras Markaz linkage)
- **Ras Markaz & Energy Hub** *(strategic topic)*
  - Overview of Ras Markaz crude & product facilities
  - Pipeline & storage integration with Port
- **Shipping Lines & Agents**
  - List of Shipping Lines calling Duqm
  - List of Shipping Agents (contacts, email/phone)
  - Sailing Schedules (if provided as PDF / external link)

12.6 Investments & Strategic Industries *(Key Focus Area: Investments + topics)*

URL example: /investments/

- **Why Invest in Port of Duqm**
  - Strategic Location & Deepwater Port
  - Link to SEZAD / Duqm Freezone information (official site)
- **Investment Sectors**
  - **Green Steel** *(dedicated page)*

        - Overview of Duqm green steel initiatives (e.g., Jindal & other projects)
    - **Hydrogen & Green Fuels** *(Hydrogen, Green Ammonia, related energy projects)*
    - **Refineries & Heavy Oils** *(strategic downstream cluster)*
    - Petrochemicals & Industrial Clusters
    - Logistics & Warehousing
- **Ras Markaz Crude Oil Park**
    - Role in national energy strategy
    - Storage, pipelines & export jetties
- **Duqm Freezone & Special Economic Zone** *(explicit topic)*
    - High-level explanation of Duqm Freezone
    - Link to full SEZAD site/sitemap for detailed incentives & regulations
- **Investment Incentives & Framework**
    - Tax, customs, land lease
    - Long-term concessions
    - Investor services & one-stop-shop
- **Key Projects & Case Studies**
    - Example: Green steel project, hydrogen hubs, wind-linked energy, logistics hubs
- **Investor Resources**
    - Investment Brochures & Presentations
    - Tender / Concession Opportunities (links to Tenders where relevant)
    - Contact Investment Team (enquiry form)

12.7 Sustainability & Decarbonization 2050 ***(Key Focus Area & topic)***

URL example: /sustainability/

- **Sustainability Overview**
    - PODC Sustainability Strategy
    - **Decarbonization 2050** – headline program explaining the port's roadmap and targets
- **Green Energy & Climate Action**

    - **Green Steel & Green Industries** (link to same content or detailed page as in Investments)
    - **Green Hydrogen & Ammonia** (linked projects & MoUs)
    - **Wind Mills / Renewable Energy in Duqm** *(dedicated topic page)*
- **Environmental Management**
    - Marine & Coastal Protection
    - Emissions Management (air, GHG)
    - Waste & Water Management
- **Social & Community Sustainability**
    - Local Community Engagement Programs
    - Training & Employment of Locals (Omanization aspects)
- **Sustainability Reporting**
    - Sustainability Reports (PDF)
    - Environment & Social Policies

12.8 SMEs & Local Content *(Key Focus Area: SMEs)*

URL example: /smes/

- **SME Strategy & Local Content**
    - Role of SMEs in Port of Duqm ecosystem
    - Local value creation & ICV alignment
- **SME Programs & Initiatives**
    - Training & Capacity Building
    - Access to Opportunities (tenders, subcontracts)
- **Riyada & SME Recognition**
    - Requirements for SME classification
    - Riyada Card & benefits (linked to Vendor Registration requirements)
- **How to Become an SME Vendor**
    - Step-by-step: Vendor Registration for SMEs
    - Required documents & fees (link to E-Services → Vendor Registration)

- **Success Stories**
    - Sample SME case studies (optional future section)

12.9 News, Events & Social Media *(Key Focus Area)*

URL example: /media/

- **News & Press Releases**
    - News listing page (filters by category: Corporate, Investments, Sustainability, SMEs, HSSE, Community)
    - News detail page
- **Events & Announcements**
    - Upcoming Events (forums, roadshows, trade fairs)
    - Past Events Archive (e.g., Duqm Economic Forum, Green Industry events)
- **Social Media Hub**
    - Embedded **Instagram**, **X (Twitter)**, **LinkedIn** feeds for:
        - Latest posts
        - Hashtags (e.g., #PortOfDuqm, #DuqmGreenSteel)
    - Optional highlight tiles on Home reused here in more detail.
